

Q1/ Write a method that will remove any given character from a String ?

1. By using Naive method
2. By using replace() function
3. By using slice and concatenation
4. By using join() and list comprehension
5. By using translate() method

Q2 / Write a program to find all prime numbers up to a given range of numbers ?

```
#Read user input
```

```
min = int(input("Enter the min : "))
```

```
max = int(input("Enter the max : "))
```

```
for n in range(min,max + 1):
```

```
    if n > 1:
```

```
        for i in range(2,n):
```

```
            if (n % i) == 0:
```

```
                break
```

```
        else:
```

```
            print(n)
```

Q3 / write a function that count how many the given character repeated in a given string ?

#Read user input

min = int(input("Enter the min : "))

max = int(input("Enter the max : "))

for n in range(min,max + 1):

if n > 1:

for i in range(2,n):

if (n % i) == 0:

break

else:

print(n)
